

ROUNDBABOUT INFORMATION

CAN ROUNDBABOUTS ACCOMMODATE ALL TYPES OF VEHICLES??

Nashua – Main Street

Roundabouts are designed so school buses can traverse the circulating roadway without going onto the rough truck apron.

Hanover – NH 10

The truck apron (yellow portion in above picture) is specially designed to be used by large trucks. The truck apron is usually made of a different material to keep cars off but not prohibit trucks from using it. Sometimes the truck apron is slightly raised to further deter cars from using it.

Nashua – NH 130

The truck apron (gray cobbles in above picture) is specially designed to be used by large trucks. The truck apron is usually made of a different material to keep cars off but not prohibit trucks from using it. Sometimes the truck apron is slightly raised to further deter cars from using it.

Meredith – US 3/NH106

Motorcycles can also easily navigate through a roundabout.

Nashua – Main Street

Obviously, passenger vehicles are the main vehicle used in the design of a roundabout since they represent the majority vehicle on our road system.

ANY VEHICLE ALLOWED ON THE ROAD CAN BE ACCOMODATED THROUGH THE ROUNDBABOUT
